<td>Bald Eagle</td>
<td>Fish, small mammals, carrion, snakes</td>
<td>Humans</td>
<td>Near rivers and large lakes; nests in large trees or on high cliffs</td>
<td>carnivore</td>
</tr>
</tbody>
</table>

Are there any threats to this population? Yes, there are threats to this population. Insecticides filter into the water and infect fish, which are the primary food for Bald Eagles. How could you address those threats in the Wildlife Park? I will address those threats by maintaining a fresh water supply for the animals in the park that does not have runoff from the land.
